

JUNIOR SOFTWARE TEST AND DEVELOPMENT ENGINEER

LOCATION

Rotterdam

EDUCATION

Bachelor / Master

TYPE

Vacancy

HOURS PER WEEK

Fulltime - 40 hours

WHO ARE WE?

Tiledmedia is a young Rotterdam-based start-up creating the world's most advanced solution for streaming Virtual Reality and panoramic video. Our customers are major media and telecom industry players located worldwide, online VR video platforms, as well as developers of VR software in general. Our ClearVR solution consists of two major components: a client-side SDK for streaming low-latency and very high-quality VR, and an AWS-based content encoding and packaging service. On top of these core products we've developed our own VR and panoramic video player to demonstrate the power of our streaming solution. Located in Het Industriegebouw in Rotterdam we're growing quickly and looking for new talent to join us.

WHO ARE WE LOOKING FOR?

We're looking to expand our team with a junior software test- and development engineer. This multidisciplinary role has a key focus on designing, developing and implementing fully automated test procedures for all of our current and upcoming products in both software and hardware (e.g. VR headsets). This means that you will work with cloud-based software, software components on platforms like Android, iOS, Windows and are working closely with the other developers to design and develop functionally correct and tested code for our product releases. In addition, you'll interact with our customers worldwide, encode and package VR video, develop your own tools to do QA testing and performance profiling, etc.

WHAT DO WE EXPECT FROM YOU?

As test- and development engineer you have a proactive attitude and a 'can do' mentality. You like to get your hands dirty and thrive in an atmosphere where there is a lot of diversity in your activities

ranging from day-to-day IT challenges relating to our customers to coding or devising and executing complex testing procedures. You like to solve issues and take up challenges yourself without specifically being instructed and you have an easy outgoing personality that allows you to interact with customers. You are eager to learn and delivery of high quality code that has been thoroughly tested and documented is one of your passions. Above all, you're excited about VR!

To be successful in this role you recognize yourself in this description and the bullets below:

- Analytical, accurate, 'can do' mentality and outgoing
- You get excited about learning new technologies
- Bachelor or Master degree in Computer Science, Electrical Engineering or a related field
- Recently graduated or finalizing your studies early 2018
- Experience or curriculum with automated software test procedures and development
- You've got experience with (or are interested in learning) Go, the language in which most of our core technology is written
- Experience with Android and/or iOS software development, ideally in combination with Unity and/or OpenGL, is a plus
- No 9-to-5 mentality
- Excellent communication skills and fluent in English

WHAT DO WE OFFER?

A position in a dynamic start-up team that is growing. We are an integral part of the vibrant Industriegebouw area with regular social drinks (borrels), events, coffee bars and restaurants. We offer flexible working hours. We offer a competitive salary, 30 vacation days per year and travel cost reimbursement. A state of the art development laptop and smartphone of your choice are a standard part of our introduction package, as well a daily fresh lunch, quality coffee and plenty of snacks.

HOW TO APPLY?

Send an email with your motivation and C.V. to hi@tiledmedia.com before the 19th of January. If you want more information before applying, please send an email to the same address and we'll be in touch.
